

AutoLogDL Revision History

1.3.0

Features

- Added -o / --output-dir to the file and location commands to choose where downloaded logs are saved.

1.2.0

Features

- Added offline activation for air-gapped machines using machine-code and license file. Activation files must be refreshed every 183 days (1/2 year).
- Added deactivate --local to remove the local license without internet access. If this option is used, Semaphore Software must be contacted to free up the license seat.

Improvements

- Stored licenses are now verified against both the AutoLogDL product and the machine they were activated on.

1.1.2

Improvements

- Addressed several potential issues with how AutoLogDL interfaces with ElectroLogIXS units.
-

1.1.1

Improvements

- Numerous behind the scenes improvements.
-

1.0.0

Features

- First distributed program build.
- Automates the ability to download logs from signal equipment through a Command Line Interface (CLI).
- Supports downloading logs from ElectroLogIXS and MicroAide CWR devices.
- Supports the following log types:
 - ElectroLogIXS
 - Data log

AutoLogDL Revision History

- Ring status log
 - Train data log
 - Train record log
 - Crossing event log
- MicroAide CWR
 - Data log
- Allows for a single log to be downloaded through use of “location” command.
- Allows for multiple logs to be downloaded from multiple locations through use of “file” command and a Comma-Separate Values (CSV) file.
- Usage is controlled through a license that can be activated/deactivated through the CLI.
- Ability to check for new version availability through “check-new” command.
